

HR Automation for Streamlined Operations and Enhanced Employee Experience

The success of an organization depends on efficient HR practices. However, these time-consuming and complex procedures frequently make it difficult to run efficient HR operations. In order to keep up with the changing needs of a diverse and global workforce, businesses are using automation tools to improve their HR operations.

PROBLEM

The existing HR application landscape includes multiple systems that require manual data entry, taking substantial time and effort and creating data silos that lead to conflicting information, significant delays, and poor user experience.

SOLUTION

Our pre-built HR accelerator solution offers automation across the recruitment, HR, ERP, timesheet, and payroll systems, reducing implementation time and improving flexibility, scalability, and customization to meet changing business needs.

WHAT DOES THE SOLUTION DO?

Automates employee onboarding, including application access provisioning

Synchronizes data with other systems to provide an enterprise-wide single source of truth

Automates the process of off-boarding and deprovisioning access

Provides configurable notifications to key HR stakeholder teams

Changing The Game

30% reduction in onboarding time

Automation speeds up onboarding, saving time and enabling employee productivity from day one

20% reduction in HR and IT team efforts

By automating onboarding, IT and HR teams can focus on core, more critical functions

40% reduction in compliance issues

Deprovision user accounts in multiple applications, simplifying and streamlining the off-boarding process

Reduce processing time and improve accuracy by automating data entry and validation

Streamline workflows for increased efficiency

Reduce costs associated with manual HR processes

Increase visibility into the HR process with real-time reporting and analytics

Ensure greater compliance with regulations and corporate policies
